+1 (289) 700-2028 | contact@tadg.ca | [linkedin.com/in/tadgohare](https://www.linkedin.com/in/tadgohare) | github.com/tadgohare

EDUCATION

Carleton University

Bachelor of Computer Science

Ottawa, ON

September 2021 – May 2026

Westdale Secondary School

French Immersion Certificate

Hamilton, ON

September 2016 – June 2020

EXPERIENCE

Data Analyst/Project Support Officer

Health Canada

May 2024 - May 2026

Ottawa, ON

- Created Power BI dashboards for various programs in HR to track progress
- Migrated data from outdated systems to SharePoint for easier access and better collaboration between teams
- Modernized the tracking, database, and reporting systems from outdated software to Power Platform and SharePoint
- Analyzed large datasets to find trends and patterns to help with decision making
- Modernized internal training modules using front-end design.
- Gained the ability to solve technical problems and communicate with non-technical staff working with a non-technical team and solving technical problems independently without the help of management

Student Systems Engineer

Canadian Air Transport Security Authority (CATSA – ACSTA)

May 2022 - September 2022

Ottawa, ON

- Upgraded systems for a return to work in a post-COVID working environment
- Worked on creating tools to further help with workflow tasks
- Spoke both English and French in a professional environment

VOLUNTEER EXPERIENCE

Branch Ambassador

Young Professionals Network

July 2025 – May 2026

Ottawa, ON

- Assist the YPN with communications for upcoming networking events such as GCMegaConnEX, as well as help facilitate these events

PROJECTS

MakerCon | JavaScript, Node.js, React Native, Google Cloud

March 2023

- Smartphone app that identifies colour, text and different objects to help those who are visually impaired
- Uses Google Vision API to identify objects and text and uses Google Text-To-Speech API to read the data aloud
- Mobile component of application built using React Native

Diary AI | JavaScript, React, Python, OpenAI

January 2023

- AI powered journaling web application that follows up on entries
- Used OpenAI GPT-3 to compound prompts in a Chat-GPT way but for larger responses.
- Helps users writers block by formulating custom response prompts

OASIS Shock Therapy Device | C++, QT

November - December 2022

- Simulation of an OASIS home shock therapy device that achieved 80% of the original device's functionality
- Consisted of using C++ and the QT framework for the GUI
- Project was conducted using software engineering paradigms such as UML diagrams and Agile Development
